

How do I migrate PeakHour 3 settings to PeakHour 4?

Note: Due to Apple's AppStore rules and restrictions, PeakHour 4 cannot automatically import settings from prior versions. These instructions are provided as-is and are not fully regression tested.

The process is slightly different depending on whether you're using the [Paddle or Mac Appstore](#) version of PeakHour. See [How do I tell which distribution of PeakHour I have?](#) if you're unsure.

Direct (Paddle) version

1. Close **all** running instances of PeakHour.
2. Launch 'Terminal' (if you're unsure how, see here: <https://www.wikihow.com/Open-a-Terminal-Window-in-Mac>).
3. Copy and paste the following command into Terminal:

```
cp ~/Library/Preferences/com.digitician.peakhour.plist ~/Library/Preferences/com.digitician.peakhour4.plist
```

Mac Appstore version

1. Close **all** running instances of PeakHour.
2. Launch 'Terminal' (if you're unsure how, see here: <https://www.wikihow.com/Open-a-Terminal-Window-in-Mac>).
3. Copy and paste the following commands into Terminal:

```
rm -rf ~/Library/Containers/com.digitician.peakhour4
cp -r ~/Library/Containers/com.digitician.peakhour ~/Library/Containers/com.digitician.peakhour4
```

Once complete, reboot your Mac. This will ensure any old cached preferences are cleared.
