

# Fonts used in the menu bar appear the wrong size / mis-aligned

The font used to report upload/download speed in the menu bar is called "Apple LiGothic". This font can sometimes become inadvertently disabled, which results in upload/download numbers looking like this:

The fix for this is simple:

1. Open the **Font Book** app (simplest way: type "Font Book" into Spotlight search and hit **Enter**)
2. Type **Apple LiGothic** into the search field.
3. Select Apple LiGothic > Medium in the font list.
4. Choose **Edit > Enable "Apple LiGothic Medium"** from the menu.
5. As soon as you do this, PeakHour's upload/download menu bar display should render properly:
