

How do I migrate my settings from PeakHour 2?

PeakHour 3 is a brand new app and because of the way Apple (and in particular Mac Appstore) apps are sandboxed, it's not possible to automatically migrate settings across.

If you would like to manually copy your settings over from PeakHour 2, follow these steps:

1. Open **Terminal.app** (the easiest way to launch is to type 'Terminal' into Spotlight or click the app in /Applications/Utilities/Terminal.app)
2. Depending on the [distribution of PeakHour 3](#) you have, type the following commands:

Mac Appstore

```
cp -r ~/Library/Containers/com.digitician.examinet/* ~/Library/Containers/com.digitician.peakhour
```

Direct

```
cp -r ~/Library/Containers/com.digitician.examinet/Data/Library/Application\ Support/PeakHour ~/Library/
/Application\ Support
cp -r ~/Library/Containers/com.digitician.examinet/Data/Library/Preferences/com.digitician.examinet.
plist ~/Library/Preferences/com.digitician.peakhour.plist
```
