

Connection Quality Monitor

The Target tab mainly provides a summary of the currently selected target, showing you information about its SNMP or UPnP configuration.

Description	This field lets you configure a description or name for this target. The description is used throughout PeakHour to refer to the target, so it's recommended that you set something that is meaningful to you.
Enabled	Determines if this Target is enabled (visible) or disabled (hidden).
Hide if unreachable	If the device can't be found or is unreachable, hide it from the main view and (if enabled) the menu bar.
Status	The status of this Target.
Monitoring	A description of what this Target is monitoring.
Edit in Configuration Assistant	Click this button to edit the Target's configuration. See Configuration Assistant for more information.

Connection Quality (fast.com) Enabled
