

How to copy my PeakHour configuration to another machine.

The process is slightly different depending on whether you're using the [Paddle](#) or [Mac Appstore](#) version of PeakHour.

 Ensure PeakHour is not running on either machine whilst you do this.

Direct (Paddle) version

1. Copy the file `~/Library/Preferences/com.digitician.peakhour.plist` to the same directory on the target machine.
2. Copy the directory `~/Library/Application Support/PeakHour` to `~/Library/Application Support` on the target machine.

Mac Appstore version

1. Copy the directory `~/Library/Containers/com.digitician.peakhour` to `~/Library/Containers` on the target machine.

 Once complete, reboot the target Mac. This will ensure any old cached preferences are cleared.
